

Hypertension: Improvement in Blood Pressure (Measure)

Definition:	Percentage of patients aged 18-85 years of age with a diagnosis of hypertension whose blood pressure improved during the measurement period
Improvement Notation:	A higher score indicates better quality
Measurement Period:	January 1, 20XX through December 31, 20XX
Transmission Format:	TBD
Scoring:	Proportion
Type:	OUTCOME
ID:	65
Version:	7
NQF:	Not Applicable
GUID:	1d8363ce-a529-490b-8c98-9b54aa75da06
Measure Set:	Not Applicable
Eligibility:	Eligible Professionals / Eligible Clinicians
Domain:	Effective Clinical Care

Population Criteria Section

Initial Population	AND: Age >= 18 year(s) at: "Measurement Period"
	AND: Age < 85 year(s) at: "Measurement Period"
	AND: First:
	"Occurrence A of Encounter, Performed: Blood Pressure Visit" satisfies all:
	< 6 month(s) starts after or concurrent with start of "Measurement Period"
	overlaps "Diagnosis: Essential Hypertension"
	overlaps "Physical Exam, Performed: Systolic Blood Pressure (result)"
	AND: "Physical Exam, Performed: Systolic Blood Pressure" satisfies all:
	Most Recent: (result) during "Occurrence A of Encounter, Performed: Blood Pressure Visit"
	(result >= 140 mmHg)
Denominator	AND: Initial Population
Denominator Exclusions	OR: "Encounter, Performed: Encounter Inpatient (discharge status: Discharged to Home for Hospice Care)" ends during "Measurement Period"
	OR: "Encounter, Performed: Encounter Inpatient (discharge status: Discharged to Health Care Facility for Hospice Care)" ends during "Measurement Period"
	OR: Union of:
	"Intervention, Order: Hospice care ambulatory"
	"Intervention, Performed: Hospice care ambulatory"
	overlaps "Measurement Period"
	OR: Union of:
	"Procedure, Performed: Kidney Transplant" starts before end of "Measurement Period"

	"Procedure, Performed: Hemodialysis" starts before end of "Measurement Period"
	"Procedure, Performed: Peritoneal Dialysis" starts before end of "Measurement Period"
	"Diagnosis: Pregnancy" overlaps "Measurement Period"
	"Diagnosis: End Stage Renal Disease" overlaps "Measurement Period"
Numerator	AND: "Occurrence B of Encounter, Performed: Blood Pressure Visit" satisfies all:
	First: ≥ 6 month(s) starts after end of "Occurrence A of Encounter, Performed: Blood Pressure Visit"
	ends during "Measurement Period"
	AND:
	OR: "Physical Exam, Performed: Delta systolic blood pressure" satisfies all:
	(result ≥ 10 mmHg) starts after or concurrent with end of Most Recent: "Physical Exam, Performed: Systolic Blood Pressure (result)" during "Occurrence B of Encounter, Performed: Blood Pressure Visit"
	overlaps "Occurrence B of Encounter, Performed: Blood Pressure Visit"
	OR: "Physical Exam, Performed: Systolic Blood Pressure" satisfies all:
	Most Recent: (result) during "Occurrence B of Encounter, Performed: Blood Pressure Visit"
	(result < 140 mmHg)
Numerator Exclusions	None
Denominator Exceptions	None
Stratification	None

Data Criteria (QDM Variables)

Data Criteria (QDM Variables)	None

Stratification:	None
Risk Adjustment:	None
Rate Aggregation:	None

Rationale:	Hypertension, or high blood pressure, is a very common and dangerous condition that increases risk for heart disease and stroke, two of the leading causes of death for Americans (Farley et al., 2010). Compared with other dietary, lifestyle, and metabolic risk factors, high blood pressure is the leading cause of death in women and the second-leading cause of death in men, behind smoking (Danaei et al., 2011). Approximately 1 in 3 U.S. adults, or about 70 million people, have high blood pressure but only about half (52%) of these people have their high blood pressure under control. Additionally, data from NHANES 2011 to 2012 found that 17.2% of U.S. adults are not aware they have hypertension (Nwankwo et al., 2013). Projections show that by 2030, approximately 41.4% of US adults will have hypertension, an increase of 8.4% from 2012 estimates (Heidenreich et al., 2011). The estimated direct and indirect cost of high blood pressure for 2011 is \$46.4 billion. This total includes direct costs such as the cost of physicians and other health professionals, hospital services, prescribed medications and home health care, as well as indirect costs due to loss of productivity from premature mortality (Mozaffarian et al., 2015). Projections show that by 2030, the total cost of high blood pressure could increase to an estimated \$274 billion (Heidenreich et al., 2011). Better control of blood pressure has been shown to significantly reduce the probability that undesirable and costly outcomes will occur. In clinical trials, antihypertensive therapy has been associated with reductions in stroke incidence (35-40%), myocardial infarction (20-25%) and heart failure (>50%) (Chobanian et al., 2003). Thus, the relationship between the measure (control of hypertension) and the long-term clinical outcomes listed is well established.
Clinical Recommendation Statement:	The Seventh Report of the Joint National Committee on Prevention, Detection, Evaluation, and Treatment of High Blood Pressure (JNC 7): Treating systolic blood pressure and diastolic blood pressure to targets that are <140/90 mmHg is associated with a decrease in cardiovascular disease complications

Definition:	Adequate control: a systolic blood pressure < 140 mmHg. Uncontrolled blood pressure: a systolic blood pressure $\geq$ 140 mmHg. Uncontrolled baseline blood pressure: systolic blood pressure $\geq$ 140 mmHg that is taken during the first outpatient encounter of the measurement year in which the patient has an active diagnosis of hypertension. This must occur during the first six months of the year. If the patient with hypertension has uncontrolled blood pressure during the first outpatient encounter of the measurement year, then include the patient in the initial patient population of the measure. Follow-up blood pressure: systolic blood pressure taken during the first outpatient encounter during the measurement year that occurs at least six months after the baseline blood pressure. Improvement in blood pressure: the follow-up blood pressure is at least 10 mmHg less than the baseline systolic blood pressure.
Guidance:	Blood pressure readings must be taken while the patient is sitting. If multiple measurements occur on the same date, the last systolic and diastolic readings should be used. "Occurrence A of Physical Exam, Performed: Systolic Blood Pressure (result)" represents the baseline blood pressure, which must occur prior to "Occurrence B of Physical Exam, Performed: Systolic Blood Pressure (result)", which represents the follow-up blood pressure. To calculate the "Physical Exam, Performed: Delta systolic blood pressure (result)" data element, subtract the value of "Occurrence B of Physical Exam, Performed: Systolic Blood Pressure (result)" from the value of "Occurrence A of Physical Exam, Performed: Systolic Blood Pressure (result)". The data element "Physical Exam, Performed: Delta systolic blood pressure (result)" is intended to represent the result of the mathematic comparison between systolic blood pressures taken during two separate visits. This is a calculation artifact, and there's no requirement to document the delta data element in the medical record.
Measure Population:	
Measure Observations:	
Supplemental Data Elements:	For every patient evaluated by this measure also identify payer, race, ethnicity and sex
